NVS-100 9 Dec

Dear Dr. Runge:

The Union of Concerned Scientists has recently unveiled the Guardian, an SUV design made from "off-the-shelf" technologies, that if the auto industry adopted, it would save thousands of lives each year and save money with a 27.5 mpg at the gas pump, without compromising on quality.

I urge you to do all in your power to see that the auto industry adopts this technology.

Thank you-

James V. Green
