RE: Docket No FAA-1999-5836 Notice No. 99-09-19

Dear Sir:

Please consider this a Request for Extension of Time for Comments to the above referenced Docket under 14 C.F.R. §11.29(c).

Petitioner, Southern Aero Parts, FAA Repair station QAKR523K represents the interest of over 40 customers involved in the maintenance, alteration and preventive maintenance of civil aviation products, components and parts. As a representative of entities currently certificated under 14 C.F.R. Part 145, the Petitioner has a substantive interest in the proposed rule.

Many of Petitioner's vendors are non-certificated that perform specific control processes. Under the proposed rule, these non-certificated sources will be required to allow the Federal Aviation Administration (FAA) access to their facilities for the purpose of determining compliance with the Federal Aviation Regulations (FARs). Among other reasons, Petitioner seeks the extension of time for comments in order to provide those non-certificated sources a copy of the proposed rulemaking and to allow those non-certificated entities the time to review the notice and to provide their comments.

In addition to the above, Petitioner believes that good cause exists to extend the comment period to the maximum allowable on the basis on the FAA's own observation in the notice that this proposed rule has been under consideration since 1975. The

proposal contains many changes to the requirements for the certification of repair stations which must be carefully considered by each of our repair stations and service centers entities currently certificated under 14 C.F.R. Part 145. These entities are located in the United States and are anticipated to be in foreign countries. The ability to access the proposed rule and to provide comment on the multiple changes is, in some cases, limited and may take as much as thirty (45) days for delivery.

S.A.I.

SOUTHERN AEROPARTS, INC.

Finally, the likelihood that the public will be given another opportunity to provide the agency substantive information and comment on the rules governing repair stations is remote considering the time it has taken to issue this proposal. This means that the proposed rule must be able to address future issues in a manner that allows the agency and the public to have confidence in the rule and the entities governed by the rule. It is imperative that all interested parties be given as much time as possible to review the proposal and provide substantive information and comment. Southern Aero Parts believe that the current comment period is insufficient for this purpose.

For the reasons stated, it is in the agency's, and indeed, in the public's, best interest to provide the maximum amount of time for comments on this proposal.

Therefore, the Petitioner respectfully request the FAA extend its Comment Period, at a minimum, to March 31, 2000.

Sincerely,

George Szabla
Vice President
Southern Aero Parts
