President Clinton:

Dear President,

I am wrining concerning federally mandated drug testing program put in place by DOT/FAA. Since the new validity test has been implemented last year, there is a number of workers in airline industry who have lost their employment with the result of "adultrated" "substituted" level detected in their urine sample. This regulation has to be rewritten since there is a small population who are totally innocent being accused of altering the drug screening test result by some means, however because of their medical conditions, smaller in body size, high metabolism, etc. No more innocent workers should be accused of the crime they did not commit. Thank you kindly for your time,

Akemi Anderson
