

I am complaining about aviation noise caused by small propeller planes from nearby Berz Macomb County Airport, Macomb, Michigan. Small single engine prop-planes fly directy over my house, located in a large subdivision, at very low altitude (approx. 150 feet). These planes are used for flight instruction at Berz Macomb County Airport and are extremely noisy. The noise is the worst during early morning hours on weekends (Sat/Sun. 8:00 am) and evening hours (until 11:30 pm!!!). The noise frequency is another big problem since flight instructors use the same flight pattern. The aviation noise frequency caused by small prop-planes gets as high as 20/hour !!!

Another big problem is the reduced real estate value because of aviation noise, especially since the noise frequency has increased significantly over the past few months.

In the interest of neighbors, the children in the sub and the community, please let me know what can be done to reduce the noise.

Thank you.

Dr. Uwe B. Klossowski
