

I urge you to raise the light truck CAFE standards aggressively. Automakers can and should improve fuel economy. It is good for the environment, it is good for our economy and it is good for our national security. CAFE standards have been stagnant for far too long. Ford says its hybrid escape will get 40 mpg and GM says it can increase fuel economy by 25%. I think we should increase the CAFE standards by at least 25%, if not more. We were able to do it in the 70s during the oil embargo. There is no reason we should not be able to do it today. Thank you for considering my comments. America depends upon you to make the forward thinking decision.
