

In a fast moving society like in the one we live today, technological changes are a must. The implementation of the reduction in the vertical separation minimums system is something that will cost. I believe that in the long run it will save a lot of money to airline operators and public. I favor the decrease in vertical separation from 2000ft to 1000 as proposed because I believe that we now have the technology to do it in a safe manner. I believe that the RVSM will increase safety and movility of the aviation Industry.
