

To Whom It May Concern:

The **Dangerous Goods Council**© is on the verge of providing an on-line hazardous materials training program for General Awareness as well as Function Specific Training. We would like to propose the use of an “electronic instructor” in place of an on-site instructor. The “electronic instructor” would be immediately available via Instant Message (IM), E-mail, or phone.

Brief Biography;

The **Dangerous Goods Council**© is an educational organization that promotes safety in the transporting and handling of hazardous materials both domestically and internationally. We train and support our customers so they can ship hazardous materials in compliance with the law using 49-CFR, IATA, and the IMDG regulations. The **Dangerous Goods Council**© also produces and supports a Full Compliance Software technology called **Haz-Shipper**© for individual PC's, network, and the web. It has the logic of the 49-CFR, IATA, and IMDG regulations as well as all UPS standards. With the **Haz-Shipper**© (HAZMAT Compliance Software) you can create and save templates; print certification (end-of-day report), check inner & outer compliance limits; check carrier limits; create your own technical name database; add LTD-QTY, RQ, Inhalation Hazard, etc. to the paperwork, share all databases (customer, template, etc.) for all modes of transportation. It also integrates completely with the UPS Worldship® or any other shipping solution.

Sincerely,

Mario Gordon
Dangerous Goods Council
