

I wish to oppose any decrease in the minimum altitude of 1500 feet that helicopters must fly at over parks and raw terrain!

The recent deaths in Kauai with the Jack Harter crash probably would have been avoided if they had not been given an exemption to fly below the minimum of 1500 feet.

The flying public really don't know the risk they face in our copter tours so it's up to you FAA; and Us residents who do understand the risks, to make sure the copters fly safe; which really means a minimum of 1500 feet!!

Mahalo for rejecting the copters petition to decrease this 1500 ft minimum!
