Docket number [FAA-2000-10910] - 490

To Whom It May Concern:

I fully support the FAA's effort to rectify a long-standing oversight in the Collision Avoidance of air traffic. I think that collision avoidance systems should be mandatory on all aircraft. It enables you to be able to fly without concern about the traffic around you and know that you're not on a collision course with them. Also, you don't have to notify an air traffic center to get a traffic update every couple minutes. With these systems there would hardly be any airplane crashes in the future. I fully support the FAA's intent to look forward and embrace new technologies when they become available.

Sincerely,

Clayton Andres
