

RSPA-03-15327 (Docket No. HM-206B)

NON-ODORIZED labeling. LPG must be further defined. Propylene is an LPG but should not be required to add NON-ODORIZED. Where does one stop. We will need to further define LPG by actual chemical name for compliance to this regulation. I believe firemen will be relying on any flammable compressed gas to give off an odor if this is passed. This does not take the place of good training and awareness on their part. (Check for explosive gases when called to emergencies. )
