

docket number FAA-2004-18596

As a patient on Oxygen I am interested in this rule and would like a new policy to allow airsep on all airlines' As of now some airlines allow no Oxygen at all on board which means we cannot use that airline.

. I travel by car now because the difficulty of setting up oxygen on airlines and the extra cost involved. This takes longer and has its own problems. But allowing this system the airsep on airlines the machine makes its own oxygen. It runs by battery or electricity. It is portable and patients could travel by the airlines anywhere. And it is not pressurized so therefore would not be a safety problem.

I encourage the airlines and government to adopt this rule change therefore allowing people like me to fly with O2 and the airsep concentrator. Thanks
